U.S. Patent and Trademark Office PTOL-303 (Rev. 11-03) Continuation of 5. does NOT place the application in condition for allowance because: Applicant's arguments are not persuasive. Applicant argues that Becker teaches away from forming a balloon from the materials as claimed since Becker teaches forming the balloon from types of materials other than the type disclosed for forming the catheter shaft (i.e., Becker teaches forming the balloon from materials other than the types claimed by Applicant.) In response, Examiner reasserts that Onohara teaches that the same material used for forming the catheter shaft can be used for forming the balloon. Thus, Onohara provides the motivation for using the materials disclosed by Becker for forming the catheter shaft to also form the balloon. Applicant also argues that the catheters in the Miyata and Joh references are not gastrostomy feeding devices. In response, Examiner emphasizes that the references disclose the structures as claimed by Applicant and are capable of being used in the stomach. A recitation of the intended use of the claimed invention must result in a structural difference between the claimed invention and the prior art in order to patentably distinguish the claimed invention from the prior art. If the prior art structure is capable of performing the intended use, then it meets the claim. In a claim drawn to a process of making, the intended use must result in a manipulative difference as compared to the prior art. See In re Casey, 152 USPQ 235 (CCPA 1967) and In re Otto, 136 USPQ 458, 459 (CCPA 1963)..
